

Emergency Work on Wintergreen Wastewater Treatment Plant

The Wintergreen Wastewater Treatment Plant (the "WWTP") was replaced in October 2024, prior to what is known as ski season at Wintergreen. Ski season typically begins in December of each year and ends in March of the following year. During this period of time, the equalization basin at the WWTP has experienced overflows. The NCSA entered into a Consent Order with the Virginia Department of Environmental Quality which requires that no additional overflows occur. In an effort to comply with this requirement, the NCSA entered into a contract on August 4, 2026, with Integrated Water Services, LLC to replace the membranes used in the WWTP. This contract was awarded on an emergency basis.

This notice is being issued pursuant to Va Code § 2.2-4303(F).
